Analytes \ EQA Programmes	Serum Chemistry	Blood Gas	Co-oximetry	HbA1c	Endocrine	Haematinics	Cardiac Markers	Urine Chemistry	Bilirubin	Lipid	ED Tox	NTpro-BNP	BNP-32	CRP	Porphyrin	Bile Acid	Ammonia	Homocysteine	Serum ACE	Urine Oxalate & Citrate	Pregnancy Testing- Serum hCG	Therapeutic Drug Monitoring	Whole Blood Immunosuppressants	FOB / FIT	Renal Calculi	Urinalysis	Pregnancy Testing- Urine hCG	Haemoglobin	Lipid & Glucose	Plasma Cardiac Markers	Glucose / Ketones	INR	HIV	Pre-Term Labour Markers	Creatinine	Urine Drugs Of Abuse †	D-dimer	CRP
Adjusted Calcium	●																																				
Alanine Aminotransferase	●																																				
Albumin	●																																				
Albumin (Urine)								●																		●											
Albumin / Creatinine Ratio								●																		●											
Alkaline Phosphatase	●																																				
Amikacin																						●															
Ammonia																	●																				
Amphetamine •																																			●		
Amylase	●							●																													
Apolipoprotein A1										●																											
Apolipoprotein B										●																											
Aspartate Aminotransferase	●																																				
Vitamin B12						●																															
Barbiturates •																																			●		
Benzodiazepine •																																			●		
Actual Bicarb		●																																			
Bicarbonate	●																																				
Bile Acids																●																					
Bilirubin (Conjugated)									●																												
Bilirubin (Total)									●																												
Bilirubin (Urine)																										●											
BNP-32													●																								
Buprenorphine •																																			●		
Calcium (Total)	●							●																													
Calculated Globulins	●																																				
Cannabis •																																			●		
Carbamazepine																						●															
Carboxyhaemoglobin			●																																		
Chloride	●	●						●																													
Cholesterol (Total)										●																			●								
Ciclosporin																							●														
Citrate																					●																
CKMB (Total)							●																														
CK-MB (Activity)							●																														
Cocaine •																																			●		
Cortisol						●																															
Creatine Kinase	●																																				
Creatinine	●	●						●																										●			
CRP														●																							●
D-dimer																																				●	
Digoxin																						●															
eGFR	●																																	●			
Ethanol (Serum)											●																										
Ethanol (Whole Blood)											●																										
Ferritin						●																															
Foetal Fibronectin •																																	●				
Folate						●																															
FOB																								●													
FIT																								●													
Free T3					●																																
Free T4					●																																
FSH					●																																
Gamma Glutamyl Transferase	●																																				
Gentamicin	●																					●															
Glucose	●	●						●																		●			●		●						
[H+]		●																								●											
Haematocrit		●																																			
Haemoglobin (Total)			●																									●									
HbA1c				●																																	
hCG (Serum) •																					●																
hCG (Urine) •																											●										
HDL Cholesterol										●																			●								
Heroin •																																			●		
HIV																																	●				
Homocysteine																		●																			
IGFBP-1																																	●				
Ionized Calcium		●																																			
INR																																●					
Iron	●					●
